

Central Everglades Planning Project Configuration Summary Sheet

Configuration Name: Establish a Unique and Descriptive Name of the Proposed Configuration.

CEPP w/ a wetland twist

Author of the Configuration: Identify the name of the Author that developed the Configuration during the exercise.

JERILYN ASTWORTH (FDEP)

Configuration's General Description: This description should be able to convey the general aspects, elements, and general location of management measures in this configuration.

DECOMP'S alternative A: Full HRF / Full MC
Remove L-67 spoil mounds + place
water conveyance structures to move H₂O to 3B.
seepage feature is a wetland Buffer
+ Bridging elevated Roadway-south

Management Measures: List the management measures used in the configuration (Pump Stations, Spreader Canals, Canal Plugs and Backfill).

Backfill, spreader canals, bridges,
elevated Roadway, culverts, wetland buffers

How Water Flows Through the Configuration: This description should identify the travel route of the water that the configuration will be managing. Identify where the water is coming from and where it goes. The Author should be able to generally describe how the water gets from the originating water source (for example, from EAA Storage and Treatment to Florida Bay) to the final destination of the water.

EAA/STAS → SC → sheet flow →
through L&T's → under TMT → ENP
(follow arrows)

Objectives: Identify and prioritize (rank) the specific CEPP Objectives that the configuration is intended to meet (use the list of Objectives as needed).

- ① Backfill MC
- ② Wetland Buffer for seepage
- ③ Full spreader canal
- ④ Spoil mound Removal
- ⑤ Bridge | E.P.

Anticipated Benefits General Description: Identify why the Author chose the features in the configuration. List, prioritize and provide a general description of any benefits anticipated from the Proposed Configuration.

- need sheet flow.
- #2 (buffer) natural way to create seepage promoting recreation, wildlife habitats + seepage benefits.
↳ also can allow it to dry out.

Operating Assumptions General Description: List anything specifically that the Author wants relative to the operation of the configuration. Examples might be operational changes within Water Conservation Area 3, areas to focus pulse discharges or timing modifications to natural system.

very important to get water into 3B.
By not backfilling those canals. its a
compromise for Full MC / Full ~~HER~~
HRF

Other Key Elements: List the main Considerations that have not been mentioned elsewhere on this Form. Examples may include potential Recreational Opportunities or Concerns.
